

BR122E

3G SIM ready Pocket Router and 802.11n Access Point

Mobile high-speed Internet connectivity. Pocket Sized.

Mention an Internet Router and you'll have an image of a Desktop box with antennas, needing a connection to an electrical wall socket. Not any more. Introducing the new **BR122E** 3G capable 802.11n Pocket Router with Safe&Secure™ Firewall Technology.

Offering a stylish, gloss-black design, the **BR122E** allows anyone to simply plug in their existing 3G SIM Card* from their Mobile Phone into the Pocket-Sized Access point and instantly connect to your Desktop, Notebook, iPod Touch™, iPad™ or any other computing device with built-in Wireless connectivity, such as 802.11n or earlier 802.11g Wireless protocols.

Setup is a breeze too. The **BR122E** will simply activate the moment you insert your 3G SIM**, without the need for typing in Usernames or PINs for example, so you can, in a matter of seconds connect on the move. With its built-in Li-Ion Battery, this small Wireless Router offers true connectionless freedom and gives a totally new meaning to the word 'mobile'.

Built-in Security has not been taken for granted. A robust SPI Firewall takes care of your Internet connection, together with advanced features such as Port Forwarding. And if required, the **BR122E** can act as a Wireless Bridge or Wireless Client, so you have total flexibility and complete driverless installation for Windows™, MAC™ and Linux™ Operating systems.
